Mac Users Everywhere Are Being Flashed.

And They Like It.

"If 'simplicity is the ultimate sophistication,' Flash is the Rolls-Royce of file sharing software."

—Frank Boosman
Product Marketing Manager
Adobe Systems, Inc.

"I think Flash is an excellent file transfer utility. It's fast and it is very easy to use."

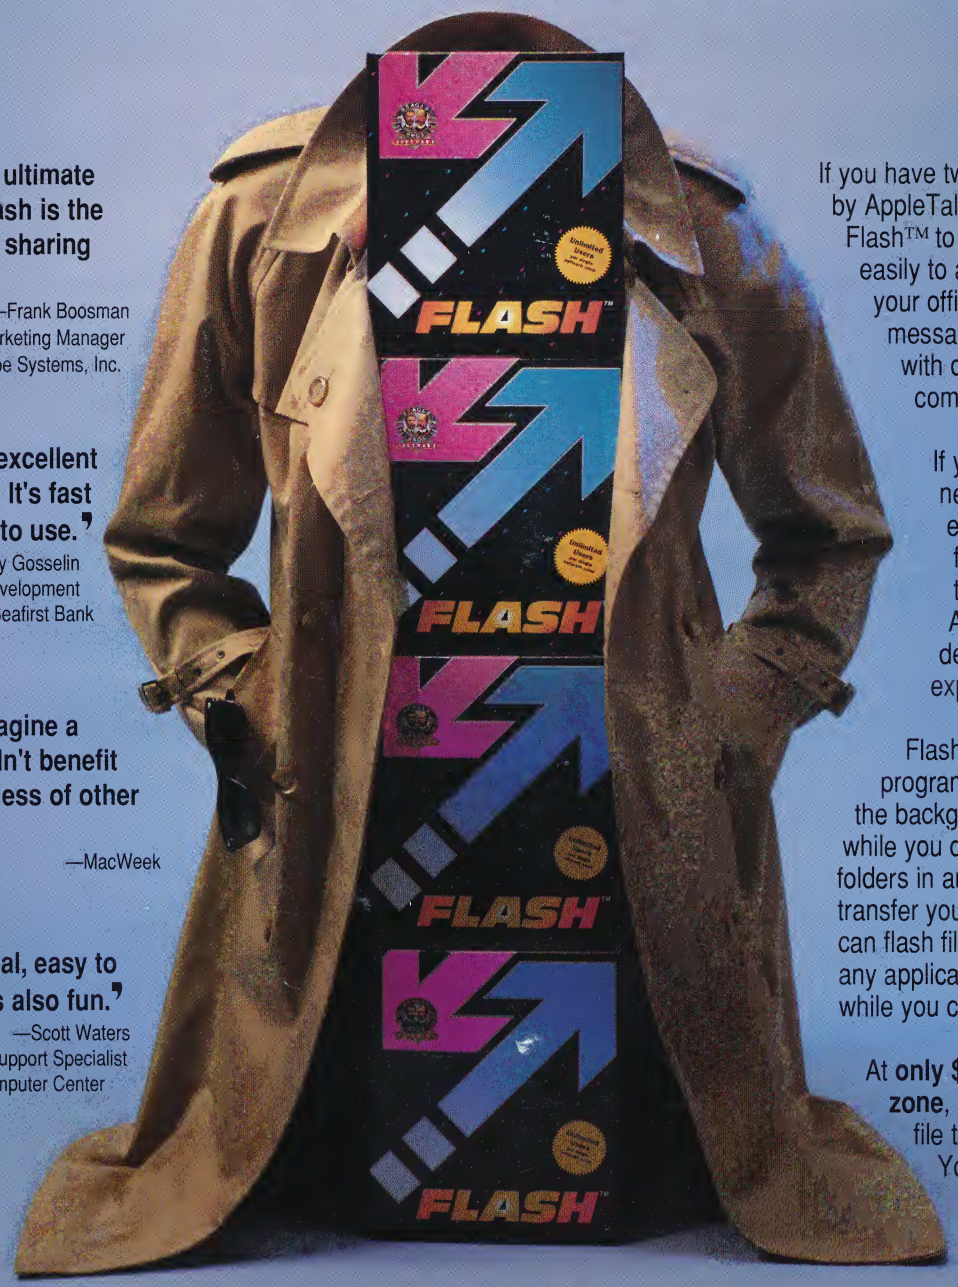
—Tracy Gosselin
Research & Development
Seafirst Bank

"...it's difficult to imagine a network that wouldn't benefit from Flash, regardless of other networking tools."

—MacWeek

"It's a very functional, easy to use program that's also fun."

—Scott Waters
Apple Support Specialist
Connecting Point Computer Center



If you have two or more Macs connected by AppleTalk cables, you can use Flash™ to transfer files quickly and easily to any person or group in your office. You can even send messages and chat in real time with others without leaving your computer.

If you already have existing network software, Flash will enhance your setup with the fastest, friendliest file transfer program available. And you don't need a dedicated file server or other expensive hardware.

Flash is the fastest file transfer program that sends and receives in the background — doing its work while you do yours. Send files and folders in any combination — even transfer your entire hard drive! You can flash files from the Finder or inside any application. Flash will send the file while you continue working.

At **only $199.95 per AppleTalk zone**, Flash is the most affordable file transfer program available. You are free to make as many copies of Flash as you want for use within a single network or AppleTalk zone.

Specification Sheet

Flash™

Description

Fast and Friendly File Transfers

All Flash file transfers are made with folders. To send a file to Joe, just drop the file into a folder named "To Joe." Flash will send the file while you get back to work. Flash will notify Joe that a file from you has arrived in a "From" folder.

Favorite Flash Features

- Flash is easy to install and use—you'll be sending files in just minutes!
- Flash works while you do. All file transfers are done in the background so you don't have to stop what you're doing when you send or receive files.
- Flash tells you when your files arrive—you don't have to check a mailbox.
- You can send notes and messages to other people on the network. Flash even has a chat feature that lets you talk with one or more people at the same time!
- Flash sends at almost 1MB per minute, so even the largest files get there fast.
- Use Flash anytime—inside any application. To send the file you are working on, select "Save As..." from the File Menu and save the file into a "To" folder.
- Send any combination of files and folders at once. Even transfer the contents of your entire hard drive—while you use both Macintoshes for other things!
- Sending to groups is just as easy. Create custom "To Group" folders for just the people you want, and sent files will automatically be received by all of them.
- Password protection and restricted access let you keep your files confidential.
- NO dedicated File Server needed—Flash will save you thousands of dollars by keeping all your Macintoshes free for productive use!

Network Zones

The best thing about Flash is its friendly price—only $199.95 for an *unlimited* number of users in a single AppleTalk network zone. Each zone requires its own original Flash program disk. Flash can communicate across network zones.

Software Requirements

Operating System: System 6.0 or newer.
Copy Protection: None.
Disk Size: Comes on one 800K disk.

Hardware Requirements

Computer: Macintosh Plus, SE, SE/30 or Macintosh II family using an AppleTalk compatible network.
Memory: 1 megabyte minimum.
Disk Drives: One 3.5 inch disk drive required. Hard disk optional.

Price: $199.95
